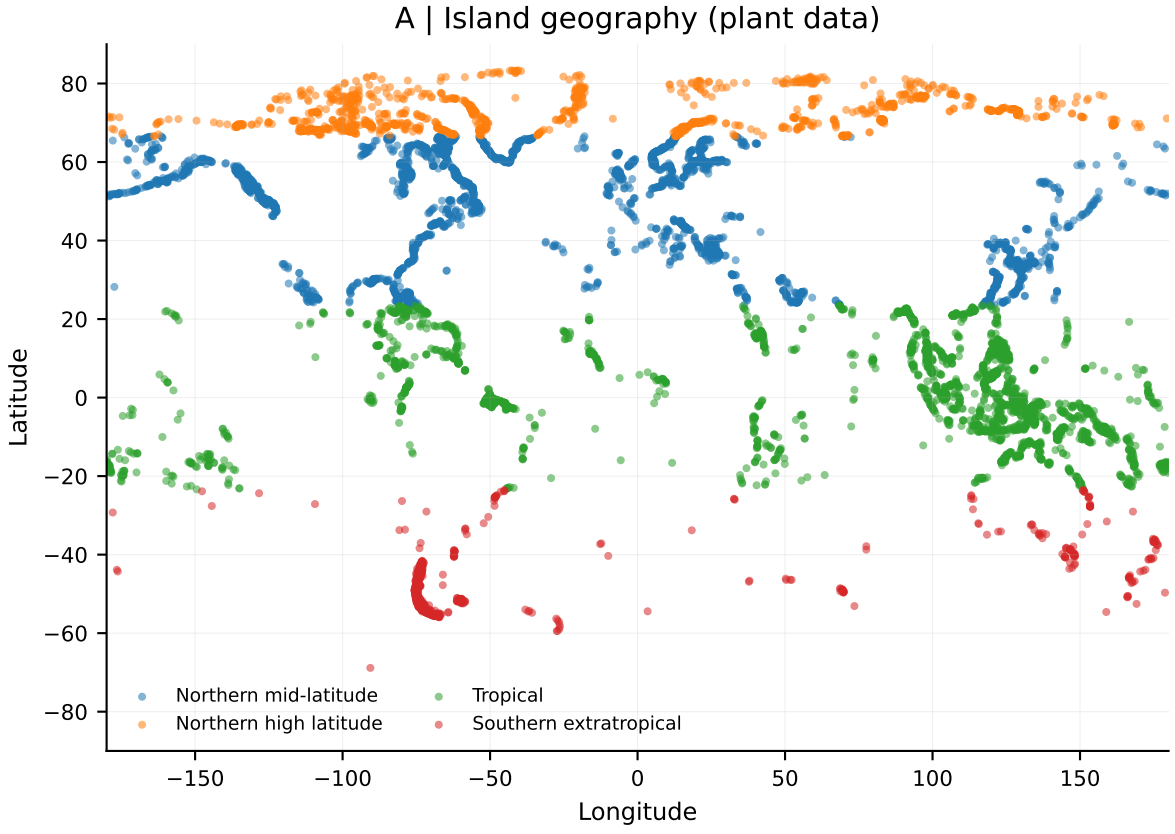

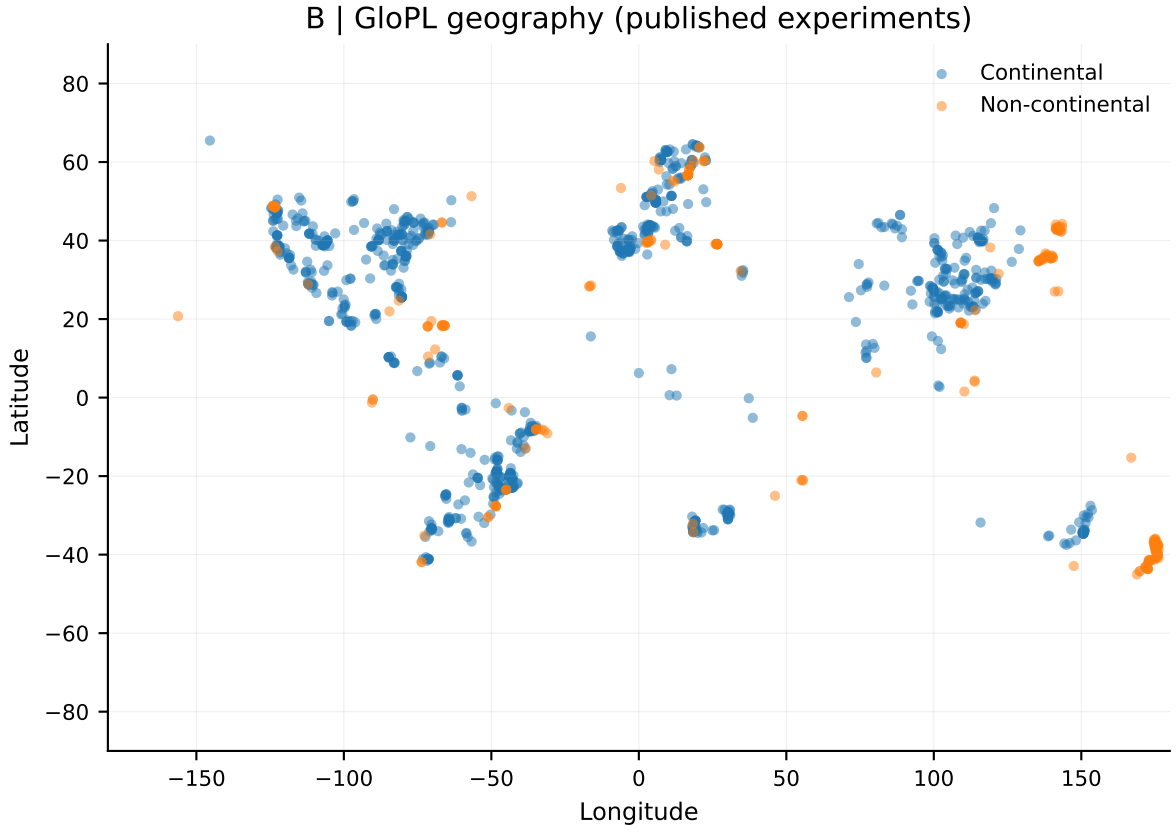

Figure 1 | Study design: independent island-trait and pollen-addition data

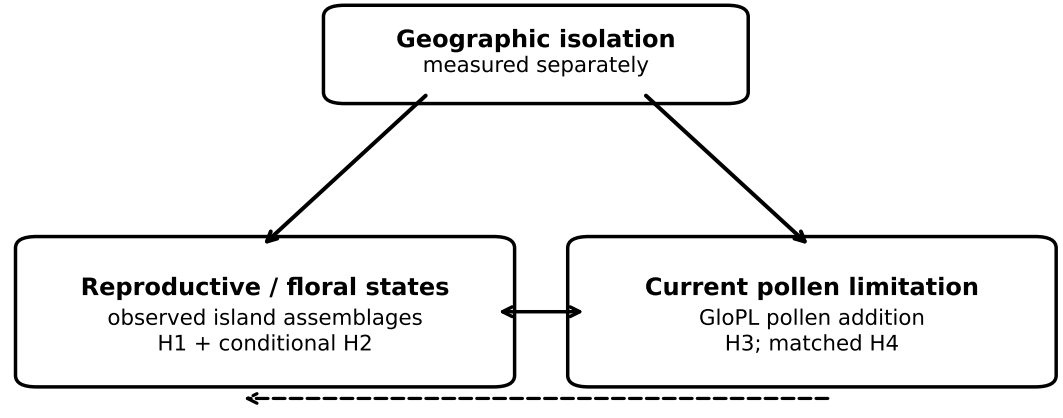

C | Non-paired evidence streams

Island observations
8,264 corrected island units
4,379 broad-H1 sampled islands
106,295 accepted species in trait universe
222,688 / 318,885 resolved trait-axis cells (69.83%)

GloPL (separate published experiment data)
2,969 experimental rows | 1,248 sites
919 publication clusters | 996 true mainland zeros

H4: exact-species overlap only (455 or 143 species)

Dashed historical causation is UNTESTED.

Solid links denote fitted associations, not a single SEM.
